aivia

our mission

In a world where care for our health and for the environment is crucial, we have firmly taken on the mission of bringing exceptional vegan food alternatives to the fore, with no food additives in their composition. Embodying the values of care for the planet and for the community, we have taken on the responsibility of offering products that promote the health of our customers and of those around them.

Aivia products are recommended both for people who wish to adopt a healthy, protein-rich diet and for those following a vegan or vegetarian diet. Aivia vegan foods meet the criteria of functional foods:

- They provide the basic nutritional principles.
- They contain active substances that help maintain and restore health.

Aivia stands as a pioneer in setting new standards for vegan foods entirely free from food additives, genetically modified organisms or any other ingredients harmful to the human body.

what sets us apart?

Clinical studies

Aivia is a patented Romanian brand in the field of vegan products, backed by clinical investigations carried out under the BIOTECH, VIASAN and CERES research and development programmes. These studies highlight the value of Aivia vegan products in nutritional strategies for people with metabolic disorders (excess weight, obesity, glucose intolerance, diabetes), in the control of dyslipidaemia (lowering total cholesterol and raising HDL cholesterol - the good cholesterol), in the diet of post-menopausal women, and in preventing cardiovascular and atherosclerotic disease.

Ingredients

Aivia products contain only the ingredients essential to a healthy, fully vegan product. The only preservative used in preparing Aivia vegan foods is salt, which is why their shelf life is up to 90 days from the date of production. We offer vegan products whose composition contains absolutely no E-numbers or genetically modified organisms. Aivia products are made in our own factory, where we develop vegan foods exclusively, in keeping with the values and principles we have taken on.

High protein content

The protein content of Aivia vegan products ranges between 11% and 27%.

aivia

grill

vegan alternative to burgers

ingredients:

water, pea protein (country of origin: E.U.), faba bean protein, pea fibre, pea flour, sunflower oil, dehydrated vegetables (onion, garlic), spices, salt, rapeseed oil.

about soya protein isolate

Soya protein is a plant-based source of protein obtained from soya beans. This form of protein stands out for its exceptional nutritional profile and is considered a complete protein, containing all nine essential amino acids: leucine, isoleucine, lysine, methionine, phenylalanine, threonine, tryptophan, valine and histidine. It is recognised as the highest-quality plant protein, with the greatest biological value of all plant protein sources, which means the body makes efficient use of a significant proportion of it.

Once the oil has been extracted from soya beans, soya protein isolate is obtained, with a protein content of 86%. Low in carbohydrate and fat, this isolate is at the same time rich in branched-chain amino acids (BCAAs). Soya protein isolate is therefore an easily digestible, fast-acting source of protein, providing significant amounts of essential amino acids. In addition, soya protein isolate is notable for its high arginine content, an amino acid with a beneficial impact on the immune system.

Benefits and characteristics of soya protein isolate:

- complete high-quality protein of non-animal origin
- rich in vitamin B, calcium, iron, magnesium, phosphorus and potassium
- rich in essential amino acids and arginine
- low in saturated fat and cholesterol
- contributes to building muscle mass
- may help lower LDL levels (so-called “bad cholesterol”)
- may help raise HDL levels (“good cholesterol”)
- may improve general wellbeing and provide a boost of energy
- recommended as a special food for athletes and people undertaking physical effort
- ideal for people with lactose or gluten intolerance
- ideal in a diet involving a calorie deficit

*like every ingredient we use, the soya protein isolate in our products is not genetically modified.
